The hotspot interaction requires students to select the region(s) of a static image as the answer choice(s). Hotspot interactions can be used only with OLA tests.

1. Select > from the main navigation menu.
2. Select Hotspot. The interaction block will be added to the editing pane.
3. Enter the interaction prompt or stem in the text box provided.
4. Before entering the answer choices, select the image that will contain the hotspot choices. One can be added in three different ways.

1. Click Browse Resources to add an image resource from your resource library. See the topic [Add Resources to Items](#) for instructions.
2. Click Add an Image to browse for and select a new image from your local drive.
3. Drag and drop the image from your local drive to the image field.
 Any image larger than 600 x 600 pixels will be resized to fit the container.
5. The selected image will appear in the Background Image field. (If necessary, click on the X button to remove the image and select a new one.)
6. Under Answer Choices, select a shape for each answer choice hotspot you want to present using the drop-down menu provided. You can use a circle, rectangle, or polygon to create each hotspot. As you select a shape, the next answer choice box will appear. All answers will be labeled as wrong. Click on the label to change an answer to correct.
7. For each answer choice, size and move the hotspot to its desired location on the image.

- Hover over a shape until coordinates appear, then click and drag to resize it.

Enter these values in the boxes provided.
